

Ulrich Walter Celebrates Twice Successful Collaboration With W+D-Langhammer

The Ulrich Walter GmbH in Diepholz had two reasons to celebrate in August: company founder and managing director Ulrich Walter turned 60 – his company 30. This specialist in organic farming of tea, coffee and spices took this double jubilee as an occasion to give interested visitors a chance to peek behind the curtain of the trademark “Lebensbaum”.

The new expansion in production as well as the logistics center BioLogX - which we successfully started up with Ulrich Walter GmbH in 2008 - were presented.

We participated in equipping 3 complete packaging lines in the new production hall and connected these to an automatic multi-line palletizing system with multi-gripper.

A gantry type PRO 03 robot serving up to 12 palletizing positions is in use here. Currently the unit includes three folding box buffer lanes, an extensive box conveyor technology with three vertical lifts in “S” form and a flexible pallet transportation technology.

This is all rounded out with a fully automatic turning table stretch wrapper unit as well as a 2-side pallet labeler.

In this way Lebensbaum products reach customers safely packed and in the accustomed quality.
