

WIN Cosmetic Purchases 7th Langhammer Palletizer

The WIN Cosmetic GmbH & Co. KG in Flörsheim-Dalsheim is one of five production locations of the Dalli Group in Germany and the Netherlands. The plant in Rhine Hesse is one of the most state-of-the-art production plants of its kind in Europe. Their extensive range of products includes cosmetics and body care products, but also various household detergents. WIN has always trusted W+D-Langhammer technology when it comes to expansions and modernization. In the past years we have been able to supply WIN with a total of 6 palletizers together with extensive conveyor technology.

Palletizing speeds have been constantly increasing and so last year we fitted a large part of our full pallet transport with frequency converters. In this way we increased the transport safety as well as the pallet speed.

In the meantime we have also received a contract to exchange the last remaining competitor palletizer with a 7th W+D-Langhammer machine. We delivered a type **PA 8** high performance layer palletizer for boxes and trays. This palletizer is fitted with a flexible **ZF 52** infeed with turning clamp for 90/180° product turns. The connection to a central full pallet transport and an empty pallet infeed including pallet dispenser are also a part of the package.
